

GOOD TASTE IS SERVED: HOW TO GET CLEAN AND ELEGANT TABLE-CLOTHES

At the table, food is not the only important matter, but also the *mise en place*. Before starting eating, the first thing we notice and observe is the table-cloth.

One-coloured or Fiandra style for an elegant and sober effect, coloured patterns or tartan for an informal and rustic one. So much different each other, both for the colour and for the textile type and quality, they are, by the way, all equally important in the customer first impression.

During Allegrini inspections at these kind of premises, comes to light that **one of the most common problem are tablecloth stains**.

Aesthetic and functionality are fundamental for a **tidy and elegant *mise en place***: with this aim, Allegrini selected some **unmissable products** that will be helpful to reach these standards.

Impossible stains

There are many stains that are very difficult to be completely removed: tomato sauce, greasy dirt, lipstick, chocolate, etc.

In these cases, just washing may be not enough, and a pre-treatment phase became necessary. Allegrini has a complete range of **ready-to-use stain-removers**, each one suitable for every specific stain.

After spraying homogeneously the right stain-remover on the stain, let it work for 10 minutes before proceeding with the following phase in the washing machine.

GOOD TASTE IS SERVED: HOW TO GET CLEAN AND ELEGANT TABLE-CLOTHES

Winning team

For a perfect washing result, the combination is the following: an alkaline detergent (**1 LAV**), a surfactant (**2 LAV**) and a bleaching agent (**3 LAV**) or, in alternative, a chlorine-free bleaching-agent (**3 LAV OXI**).

Automatically dosed with specific automatic dosing pumps, all these products are fundamental and complementary each other. The delicate fresh-laundry scent enhances the clean effect to the customer. Thanks to the bleaching-agent **3 LAV**, the most important effect is guaranteed: table-clothes are white and deeply disinfected, also washed at low temperatures.

Meanwhile, for coloured textiles, the hydrogen peroxide-based **3 LAV OXI** is the suitable product. **3 LAV OXI** allows removing all type of bleaching stains, respecting fibers and colours, at high temperatures as well.

Watchword... ironing!

A perfect *mise en place* includes a perfectly ironed table-cloth.

7 LAV is a starching-agent that unearns the washing and ironing phase, thanks to its special particles that easily penetrates into the fibers.

Moreover, being a liquid rice-starch concentrate, **7 LAV** prolongs the average textiles life duration, protecting them from difficult stains, conferring volume and satin-touch.

During the ironing phase (170°-180°C), a washable and biodegradable film is forming on the surface of the textile, protecting it from staining.

Now dinner is finally ready!

**If you outsource the laundry service, ask for Allegrini products!
Since more than 70 years, we remove any kind of dirt.**
